Week 03 – UI/UX Case Study Report

SaaS Project Management Platform

Prepared By: Gittiqa Kumari

Batch: 02

Week: 03

1. Project Overview

The goal of this project was to design a modern SaaS Project Management Platform that helps teams organize projects, assign tasks, collaborate, and track progress through a clean and user-friendly interface.

2. Problem Statement

Many project management tools become difficult to use due to complex navigation and cluttered dashboards. This project focuses on creating a simple, efficient, and visually consistent experience.

3. Target Users

Project Managers, Developers, UI/UX Designers, Marketing Teams, Freelancers, and Remote Teams.

4. User Needs

Easy project management, task assignment, collaboration, progress tracking, simple navigation, and real-time updates.

5. Design Objectives

Improve productivity, reduce user effort, create a consistent design system, enhance collaboration, and support scalability.

6. UX Process

User Research → User Persona → User Flow → Low-Fidelity Wireframes → Design System → High-Fidelity UI → Interactive Prototype.

7. User Persona

Name: Gittiqa Kumari

Age: 24

Role: Project Manager

Goals: Track progress, assign tasks, meet deadlines.

Frustrations: Switching between tools, missed updates.

8. User Flow

Login → Dashboard → Team Workspace → Task Board → Calendar → Messages → Notifications → Profile → Settings.

9. Low-Fidelity Wireframes

Wireframes were created to define layout, navigation, and information hierarchy before visual design.

LOW-FIDELITY WIREFRAMES

Early wireframes focusing on layout, navigation, and user flow before visual design.

① User

② Dashboard

③ Calendar

④ Teamwork

⑤ Notifications

⑥ Profile

⑦ Settings

Colors: #4F7CFF, #355DFF, #F8FAFC, #FFFFFF, #1F2937, #E5E7EB.
 Typography: Poppins (Headings), Inter (Body).
 Components: Buttons, Inputs, Search Bar, Cards, Icons.

Typography: Poppins (Headings), Inter (Body).

Components: Buttons, Inputs, Search Bar, Cards, Icons.

11. High-Fidelity Screens

Designed screens include Login, Dashboard, Team Workspace, Task Board, Calendar, Messages, Notifications, Profile, and Settings.

Logi... LOGIN SCREEN

Logi... DASHBOARD

TEAM WORKSPACE

TASK BOARD

CALENDAR

MESSAGE

NOTIFICATION

PROFILE

SETTING

12. Prototype

The prototype allows users to navigate through the complete workflow, starting from Login to Dashboard, Team Workspace, Task Board, Calendar, Messages, Notifications, Profile, and

Settings. Interactive navigation demonstrates the overall user journey and application flow.

13. Accessibility

High contrast, readable typography, consistent spacing, large touch targets, and clear navigation.

14. Key Features

Dashboard, Team Collaboration, Task Management, Calendar, Notifications, Profile, and Settings.

15. Challenges

Maintaining consistency across multiple screens and building reusable components using the design system.

16. Conclusion

This project demonstrates a complete UI/UX design process, from user research to interactive prototyping. The final solution provides a clean, scalable, and user-friendly interface that improves collaboration, productivity, and project management for modern teams.

17. Learnings

This project improved my skills in user research, wireframing, design systems, reusable components, high-fidelity UI design, and prototyping in Figma.

Question 01

Your platform will be used by 50,000+ users worldwide. Explain how you would design the interface to support:

- ☑ **Scalability**
- ☑ **Multi-language support**
- ☑ **Accessibility**
- ☑ **Responsive behavior**
- ☑ **Design consistency**
- ☑ **Efficient user onboarding**

Provide justification for each decision.

1. Scalability

I used reusable components and a consistent design system so the platform can easily support more users and future features.

Justification: It keeps the interface organized and easy to maintain.

2. Multi-language Support

The design uses flexible layouts and simple icons so text can be translated without affecting the UI.

Justification: This makes the platform easier to use for people from different countries.

3. Accessibility

High contrast colors, readable fonts, and large buttons were used to improve usability.

Justification: This helps all users interact with the platform comfortably.

4. Responsive Behavior

The layout is designed to work smoothly on desktop, tablet, and mobile devices.

Justification: Users can access the platform from any device.

5. Design Consistency

The same colors, typography, spacing, and components are used throughout the platform.

Justification: Consistency improves usability and creates a professional experience.

6. Efficient User Onboarding

A simple login process and clear navigation help new users get started quickly.

Justification: Easy onboarding reduces confusion and improves the user experience.

Question 02

Prepare a comprehensive UX case study explaining your entire design process, including:

- ☐ Problem Definition
- ☐ User Research
- ☐ Competitive Analysis

- ☐ Design Decisions
- ☐ Prototype Evolution
- ☐ Usability Testing
- ☐ Final Improvements

Discuss how user feedback influenced your final design and identify future enhancements.

Problem Definition

The goal was to design a simple and user-friendly project management platform that improves team collaboration and task management.

User Research

Research showed that users need a clean dashboard, easy navigation, and quick access to projects and tasks.

Competitive Analysis

Platforms like Trello, Asana, and ClickUp were studied to understand common features and best design practices.

Design Decisions

A clean layout, reusable components, consistent colors, and simple navigation were chosen to improve usability.

Prototype Evolution

The design process moved from user research to wireframes, then high-fidelity screens, and finally an interactive prototype.

Usability Testing

The prototype was reviewed and small improvements were made to spacing, navigation, and component consistency.

Final Improvements

The final design includes better organization, improved visual hierarchy, and a more consistent user interface.

User Feedback

Feedback helped improve navigation, spacing, and dashboard organization, making the platform easier to use.

Future Enhancements

- Dark Mode
- AI-powered task suggestions
- Real-time chat
- Mobile app support
- Advanced analytics
